

Plectrum v1 — visual QA heads-up

17 June 2026 · for design & product · eng detail in PLECTRUM_V1_GAP_REPORT.md

TL;DR: We're moving from Plectrum v0.6 → v1 (closer to current Figma). Almost ready. Eng has one small fix, then we need your eyes — mainly on **tabs** and **accordions**. Toggle old vs new in the avatar menu while reviewing.

The short version

Question	Answer
Ready to ship v1?	Yes — after 1 eng fix + your sign-off
Blockers?	1 (eng-only, white background token)
Need design review?	2 big ones — tabs & accordions. Plus a quick colour sweep.
Dark mode?	Nope — later.
Compare v0.6 vs v1?	Yes — avatar menu toggle.

What's actually changing?

- Primary blue-grey shifts a bit (Figma v1)
- Page/card backgrounds use a new grey scale
- Most screens look fine — tabs & accordions are the ones that might look "off"

Please look at these

High **Tabs — boxed instead of underline**

Figma says: thin line under the tab row. Active tab = primary bottom indicator. No boxes.

What you might see now: borders on all sides — tabs look boxed, indicator gets lost.

Where: iSHARE → Affiliate details → category tabs (above the accordions).

Fix: eng adjusts theme tokens. No Figma changes needed.

High **Accordions — full border instead of dividers**

Figma says: thin horizontal dividers between sections.

What you might see now: each panel has a border on all four sides — looks like stacked cards.

Where:

- **Affiliate details** — category accordion (should be dividers)
- **List journey** — chromeless variant (eng still wiring it)

- **Document drawer timeline** — bordered accordion is *intentional*, leave it

Medium **Worth a quick glance**

What	Where
Avatar background colour	Top nav avatar
Drawer shadow depth	Any slide-in drawer
Ghost / secondary buttons	Hover & disabled states
Divider weight on lists/cards	Quick scan

Low / intentional

- Primary colour slightly different from v0.6 — broader refresh coming later
- Page background grey (#fafafa vs #f6f6f6) — minor drift, separate project
- Bordered drawer accordion — that's by design

Colours (if you're spot-checking)

Role	Figma / v1	Apps today	OK?
White base	#ffffff	#ffffff	✓ after eng fix
Page background	#fafafa	#f6f6f6	minor drift
Primary 600	#487395	#3f5870	intentional for now
Panel border	#e7e7e7	#e7e7e7	✓
Drawer shadow	Figma token	custom	check in QA

Not in this release

- Dark mode
- Full Figma → code token sync
- Removing v0.6 (kept for comparison)

Your checklist

Toggle v1 in the avatar menu and tick off what you've checked:

Must do

- ☐ Affiliate details — category tabs (underline, no boxes)
- ☐ Affiliate details — category accordion (dividers only)
- ☐ Top nav — colours, avatar, active states

☐ Overview / dashboard cards

Nice to do

☐ Drawers — shadow, title, borders

☐ Lists & tables

☐ Buttons (primary, ghost, disabled)

☐ Form fields — focus & error

☐ Document drawer accordion — still bordered? good.

Reviewer	Date	v1 OK?	Notes
		☐ Yes ☐ No	

What happens next

#	What	Who
1	Fix white background token	Eng
2	Fix tabs underline	Eng
3	Fix accordion dividers	Eng
4	Fix avatar colour	Eng
5	Visual QA (above)	Design
6	Switch default to v1	Eng
